**INTERNATIONAL THERMAL SYSTEMS LAUNCHES VIRTUAL INDUSTRIAL WASHER SELECTION TOOL**

*Newly launched online industrial washer calculator enables International Thermal Systems to make customized, virtual product recommendations to help companies maximize production efficiency and minimize energy consumption.*

(MILWAUKEE, WIS – March 18, 2019) - [International Thermal Systems \(ITS\)](http://www.internationalthermalsystems.com), a global manufacturer of aqueous washers, industrial ovens, and furnaces, announced today that it has launched a [virtual industrial washer selection tool](#) designed to provide companies in the automotive, aerospace, power generation, building products, foundry, and metal stamping with a streamlined, customized experience to select the best industrial parts washer for their application. The TruClean Washer online calculator determines the best TruClean model for the cleaning process based on a user's unique criteria provided. By answering a few questions about the wash process including part size, part weight, and production rate per hour, the calculator will output the TruClean model best suited for the user's application.

"The TruClean online calculator tool is a new, market-disrupting addition to the service offerings International Thermal Systems provides to help companies be more efficient in their production process," said Tom Stricker, President of International Thermal Systems. "The virtual tool was designed to provide prospects and customers with an innovative, efficient, and customized method for determining the right washer for their production process, as well as offer information to help make the best purchasing decision."

The online selection tool determines if the user's production application requires a front loading or top loading batch washer, and calculates the appropriate conveyor washer belt width. TruClean washers are offered in 12 standard sizes for basic applications. For more complex cleaning requirements, ITS offers specialized consultation in the selection of custom-engineered washer solutions.
